Title: Automatidata Project

Subtitle: Pre Exploratory Data Analysis

Overview

A Senior Data Analyst requested a brief summary of the data to understand the data before performing an EDA on the data

Objective

Perform a summary of the data to find any issues with the dataset and what variables could be used for the model

Results

Some rows of data appeared to show invalid numbers e.g. some total_amount values were negative or zero. Total_amount and trip_distance were the variables that showed a good picture of a taxi cab ride.

Next Steps

- Find out why some rows of data show negative or zero values in the total_amount column.
- Dive deeper into the the data with a full EDA
